

Melanie Stevens, PharmD

What is your title?

I am the Pharmacy Manager at Metcalf.

What is your role at the pharmacy?

My primary role will be to make sure prescriptions are completed accurately for dispensing. This can include formulation checks, lab quality assurance, and discussions with providers to make sure all of the prescription components are correct. I am also available for patient consultations. Along with these tasks, I will also be managing the business and the staff.

How is Metcalf Compounding Pharmacy different?

Metcalf Compounding is different from traditional retail pharmacies because we mainly dispense compounded medications. These are not premade commercially available products; each prescription is made specifically for a particular individual to treat his or her specific needs.

Other than compounding, this pharmacy is also unique because we have time for each individual patient and can devote time to answering questions and giving individualized attention and service to each patron. I am greatly looking forward to my new role in which I get to dedicate my time to my patients and being someone they can reach out to when they have questions about their health and wellbeing.

What's the coolest thing you think we do at the pharmacy?

I have 2 little ones who keep me going non-stop and along with my husband we love to go on adventures all around the world as often as possible! We are just moving to Brevard and can't wait to explore this fun new area as well.
